2014 LARIMER COUNTY CHILD HEALTH SURVEY
WHY WAS THIS SURVEY CONDUCTED?

The 2014 Larimer County Child Health Survey was a cooperative effort between public health, healthcare and community organizations who identified critical gaps in local child health data.

The survey was designed to collect information that would allow partners and stakeholders to work toward a cohesive, unified approach to meeting the health needs of children now and into the future.

Results from this survey will help local organizations work together to make Larimer County a healthier place for our children to live.
The 2014 Larimer County Child Health Survey was mailed to households that participated in the 2013 Adult Health Survey that indicated they had a child 14 years or younger living in their home. The Survey was sent to 607 households in the Summer of 2014. If there was more than one child in the household, respondents were asked to report on the child who has the next birthday. About half of the surveys were completed online and the other parents returned a paper copy. The response rate was 58%.

The 36 questions on the survey were based on established, standard child health surveys. This allowed the results to be compared with state and national estimates. The survey also included questions submitted by local organizations.

The results are weighted by age and gender using 2013 Larimer County Census Bureau estimations. Weighting is a common statistical technique used to improve the representation of underrepresented groups in the sample.

Some caution should be applied when interpreting survey results as only a part of the population, a sample, is used to represent the whole population. Sampling error, also referred to as the margin of error, can be estimated. The margin of error in this survey is about ± 5%.
WHO WORKED ON THE SURVEY?

Larimer County Department of Health & Environment
* Helped develop the questionnaire

University of Colorado Health
* Helped develop the questionnaire

Team Fort Collins
* Helped develop questions regarding parental perception of substance use

Kaiser Permanente of Colorado
* Helped fund survey administration through grant funding

Health District of Northern Larimer County
* Helped develop the questionnaire, analyze the results and share the findings
WHO RESPONDED TO THE SURVEY?

ADULTS RESPONDED TO THE SURVEY ABOUT A CHILD IN THEIR HOME

THE AVERAGE AGE OF RESPONDENTS WAS 40 YEARS OLD

MOST IDENTIFIED AS A PARENT OF THE CHILD (98%)
SOME IDENTIFIED AS A GRANDPARENT OF THE CHILD (2%)

MANY IDENTIFIED AS FEMALE (76%)
FEWER IDENTIFIED AS MALE (24%)
WHO RESPONDED TO THE SURVEY?

ADULTS RESPONDED TO THE SURVEY ABOUT A CHILD IN THEIR HOME

MOST IDENTIFIED AS MARRIED (83%)
SOME IDENTIFIED AS DIVORCED (11%)
FEW IDENTIFIED AS SINGLE (4%)
FEW IDENTIFIED AS A MEMBER OF AN UNMARRIED COUPLE (2%)
WHO DID THE SURVEY ASK ABOUT?

ADULTS RESPONDED TO THE SURVEY ABOUT A CHILD IN THEIR HOME

CHILDREN WERE AGES 14 AND UNDER

- Birth - 4 years: 32%
- 5 - 9 years: 34%
- 10 - 14 years: 34%
WHO DID THE SURVEY ASK ABOUT?

ADULTS RESPONDED TO THE SURVEY ABOUT A CHILD IN THEIR HOME

ABOUT HALF THE CHILDREN WERE GIRLS AND HALF WERE BOYS

48% GIRLS

52% BOYS
WHO DID THE SURVEY ASK ABOUT?

MOST CHILDREN WERE WHITE, NON-HISPANIC

CHILD RACE/ETHNICITY

- **White, Non-Hispanic**: 87%
- **Other**: 13%
- **Hispanic**: 6%
- **Asian**: 2%
- **Black or African American**: <1%
- **American Indian or Alaska Native**: <1%
DEMOGRAPHIC DISPARITIES

DIFFERENCES BY AGE, GENDER, RACE/ETHNICITY, OR HOUSEHOLD INCOME ARE EXPLORED IN THIS PRESENTATION OF RESULTS

AGE
GROUPS:
