## 2020 COVID-19 Supplemental Survey of Larimer County Residents

The 2020 COVID-19 Supplemental Survey was sent to adult residents of Larimer County in July and August of 2020 to assess health needs during the COVID-19 pandemic. 1,463 responses were received. Data show that 2 in 3 (66%) of survey respondents were willing to get a COVID-19 vaccine if a safe and effective one becomes available, but there were differences between demographic groups.

### Age

Adults between the ages of 80-89 years were the most likely age group to say they would get a COVID-19 vaccine if one became available (80% said yes). 30-39 year olds were the most likely age group to say they would not (19% said no).

### Gender

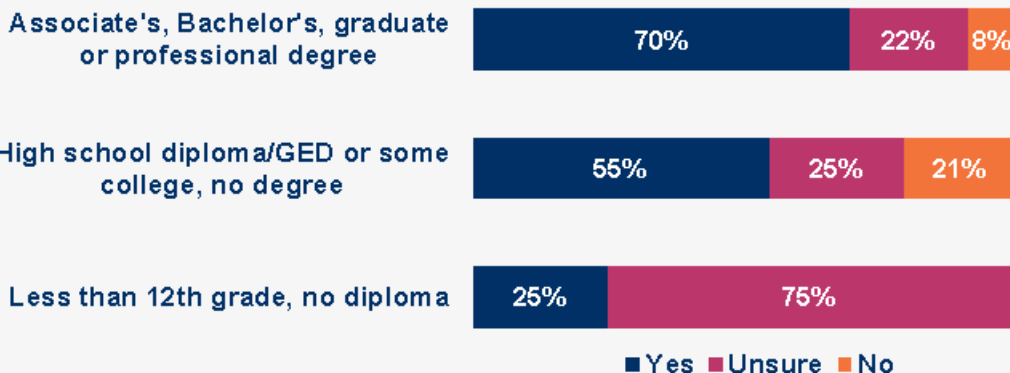

Men (72%) were more likely to say they would get a COVID-19 vaccine if one became available, compared to women (61%) and non-binary (52%).

### Race and ethnicity

A higher percentage of respondents who identify as White, non-Hispanic said they would get a COVID-19 vaccine if one became available, compared to Non-White or Hispanic.

### Education

### Education

On average, as education level increased, more survey respondents said they would get a COVID-19 vaccine if one became available.

**Getting a COVID-19 vaccine is FREE and NO health insurance is required.**

### Insurance Status:

Respondents who had health insurance were more likely to say they would get a COVID-19 vaccine (67%) compared to respondents who did not have health insurance (52%).
